CLEANING, SANITIZING, AND DISINFECTING: WHAT'S THE DIFFERENCE?

wipesplus.

The words "cleaning," "sanitizing," and "disinfecting" are often used interchangeably. This creates a lot of confusion when talking about the difference between cleaning wipes, sanitizing wipes, and disinfecting wipes. Knowing the meaning of each term is critical to ensuring products are being used for their intended purposes, maintaining compliance, and creating a safe and healthy environment for employees and customers.

You can think of cleaning, sanitizing and disinfecting like a pyramid, with cleaning at the bottom and disinfecting at the top. The higher you move up the pyramid, the more effective you are against a broader spectrum of germs.

DISINFECTING

The broadest and most powerful mechanism of germ or surface, including germs as regulated by EPA and that will almost always require bleach, rinses, and soap.

SANITIZING

The significant reduction of bacteria to a safe level. Sanitizing is often synonymous with the EPA (EPA.gov) registered and EPA-Listed sanitizers.

CLEANING

The removal of dirt and grime from surfaces. Cleaning requires less than any other of the three.

**Sanitizing labeled products.
Disinfecting labeled products.**

**EPA
REGISTERED**
